

Roby Gerson Zuñiga Silva

.NET Software Architect · Fintech & Payment Integrations

Tacna, Peru (remote) | rgersonzs95@gmail.com | linkedin.com/in/robzunigas | github.com/roby-dev | roby-dev.github.io

.NET Software Architect specializing in financial systems and payment integrations. I design distributed, secure solutions using microservices, Clean Architecture, and CQRS, including integrations with hardware-based encryption (HSM). I define application architecture, approve every new implementation, and lead code reviews for a team of about 10 developers. Available for remote work and freelance projects.

PROFESSIONAL EXPERIENCE

Caja Tacna

Tacna, Peru

Software Architect (Systems Architecture Analyst)

April 2024 – Present

- Designed the External Collectors API in .NET 8, a bridge to the YaPago platform built to Unibanca's specifications and standards, letting multiple institutions collect payments for Caja Tacna services, such as online loan payments; modular per-institution architecture, scalable behind a load balancer, with response times under 1 second.
- Integrated Unibanca's dynamic CVV validation with HSM encryption on CQRS and Clean Architecture; the flow processes about 7,000 operations per month in production.
- Designed the architecture of Caja Tacna's Flutter mobile app and approve every new implementation, including the BiPay wallet and facial biometric onboarding.
- Established and lead code reviews for a team of about 10 developers; maintain architecture standards, clean code, and best practices.
- Developed an internal monitoring platform with .NET 8 microservices, Hangfire, RabbitMQ, Redis, MongoDB, and Angular 21: standard or custom health checks, per-service frequency and downtime and latency thresholds, and per-user alerts by email or SMS.
- Optimized queries and Entity Framework in critical services, reducing cold-start time from 45s to 5s; validate stability under high transaction volumes with Apache JMeter stress tests.
- Configured CI/CD with macOS agents to automate builds and deployments of the mobile apps (APK and IPA).

Caja Tacna

Tacna, Peru

Assistant Systems Developer

July 2023 – April 2024

- Moved business logic from stored procedures to C# in .NET Framework 4.8 APIs to enable testing.
- Implemented WebSockets and Redis as a broker for real-time communication in the Flutter app and API Gateway instance synchronization.

Soporte Remoto S.A.C.

Tacna, Peru

Software Development Analyst

October 2022 – July 2023

- On a two-developer team, implemented granular permissions and raffle ticket accrual in a central casino integrator migrated to Blazor Server (.NET 6, CQRS, SignalR), with unit and integration tests.
- Independently developed a card and QR top-up platform (Blazor WebAssembly, Kushki, .NET Worker Service, WebSockets), demonstrated as operational at an industry trade show.
- Maintained legacy .NET Framework systems and configured an AWS VPS with IIS, DNS, and wildcard SSL.

Tacna Regional Health Directorate

Tacna, Peru

Full Stack Developer

May 2022 – September 2022

- Independently developed a training management platform (PostgreSQL, PHP, Angular) integrated with the Human Resources Management System; replaced physical filing and manual hour management.

EDUCATION

Universidad Privada de Tacna

Tacna, Peru

Bachelor's Degree in Systems Engineering

2015 – 2021

SKILLS

- **Backend & Architecture:** C#, .NET 8, .NET 6, .NET Framework 4.8, Microservices, CQRS, Clean Architecture, Entity Framework.
- **Payments & Integrations:** HSM, dynamic CVV validation, Kushki, RabbitMQ, Redis, WebSockets, SignalR, Hangfire.
- **Frontend & Mobile:** Angular 21, Flutter, Blazor Server, Blazor WebAssembly.
- **Data, Quality & Infrastructure:** SQL Server, PostgreSQL, MongoDB, Unit and integration testing, Apache JMeter, CI/CD, AWS, IIS.
- **Languages & Certifications:** Spanish (native); English B1. SQL Server for DBAs, Python OOP, Building Triggers in SQL Server.
